

HOW TO BREW TEA TONIC

1

Warm the water

Warm up 500ml of water, ensure the water is slightly warm, not hot.

2

Add the tea

Add one tablespoon of the tea directly to the water or use a loose leaf infuser.

3

Steep

Let it steep for 15 – 20 minutes.

4

Pour into waterer

Give the tea a quick stir or shake, then pour it into a waterer.
No need to strain the tea (unless using the chick tea).

- Provide the herbal tea to your flock once a week, in a separate waterer or dish.
- Make sure to leave your birds usual waterer available, so they also have fresh water.
- Our products can all be stored in a cool, dry place. A pantry is perfect, although if you live in a very hot climate, you can keep them refrigerated. The products have a designated 12-month shelf life but can often extend much past this date when stored properly.
- Try freezing cubes of brewed tea and add these cubes to some water as a summer treat!
